Profile

I'm a developer who has been working on different programming languages like Javascript, Typescript and Python. My main expertise is React.

I'm always open to learn new technologies and would love to work on exciting and challenging projects. Some personal characteristics of mine are self-learning, rapid adaptation focused and detailed about the problems to be solved. I can tackle almost any project involving Javascript and Typescript-based web app development.

My Experience

Jr. Software Engineer at Remigo, LLC

Aug 2021 - Jun 2022 // Remote

I worked on Front-End development for the landing page using React (Gatsby). I also worked on the Web App (Using React with Typescript and Next.js), fixing bugs and completing tickets given by technical support. I also worked as QA for the maintenance of the Web App. In this position I was also introduced to tools like Terraform, to create a lambda function that would expose an endpoint to call a service that couldn't be called from the front end.

Jr. Software Engineer at Emerald

Sep 2021 - Mar 2022 // Remote

I worked on Front-End development projects using React (with Typescript and Next.js), React Native and designing/support different websites with Figma.

Jr. Trainee Web Developer at HOKALI

Jan 2021 - Jun 2021 // Remote

I worked in the maintenance of the Website (SPA) that was made with React (using Gatsby), Material-UI and Bootstrap. I also made a Forecast Application with React Native, using API's like "open weather map" and stormglass.io. Also I created the same Application for web, with React.

Skills

Programming Languages

JavaScript (ES6), TypeScript, HTML, CSS/Sass, GraphQL, Python

Libraries & Frameworks

React, Gatsby, Node.js, React Native, Styled Components, Material UI

Tools & Platforms

Firebase, Git, Github, Heroku,

Design

Figma, Adobe Illustrator

My Experience

Universidad Tecnológica Nacional

2019- Present (expect end 2024)

In this University I'm studying for the Software Engineering Title
